FIRST DRAFT · FOR DISCUSSION

PROPOSAL · V0.1 · NOVEMBER 2026

SKYYTASK × SHOOTPORTAL

A first draft of the plan

A working document for our November 11 call

SkyyTask × ShootPortal

November 2026

Hey Geno,

I've been thinking a lot about what we talked about on our call, and I wanted to get all of it down on paper before we meet again.

This is my first draft of what a SkyyTask × ShootPortal partnership could look like: the idea, how the two platforms would work together, what your pilots and clients would see, roughly what it would cost, and the steps to get there.

Nothing here is set in stone. Please mark it up. Tell me what you like, what you don't, and what I'm missing, so we can spend our time on the 11th on what matters most to you.

Jackson Bridges
Founder, ShootPortal

THE IDEA IN ONE SENTENCE

SkyyTask keeps the job, the chat and the client. ShootPortal quietly takes over the files: a branded upload for the pilot, a beautiful delivery page for the client, and an automatic update back to SkyyTask at every step.

For pilots

One button in the SkyyTask app. Upload photos and video right there, even big files on a spotty connection. No more Drive folders.

For clients

A private, SkyyTask-branded page to view and download everything. No codes, no accounts, no Google Drive.

For SkyyTask

Automatic updates when the pilot delivers and when the client opens and downloads. You stay in control of everything else.

As you read, I'd love your take on…

1. When should a job appear in ShootPortal: when it's accepted, or when the pilot taps Complete Job?
2. Should clients get a branded email from us, a link in your SkyyTask chat, or both?
3. Do you still want a one-time code, or is a private link enough?
4. What should release a pilot's pay: submitted, viewed, or downloaded?
5. Roughly how many jobs a month, and how big are typical deliveries?
6. Does the pricing feel fair and easy to plan around?
7. Which enterprise file types matter most (thermal, mapping, point clouds, reports)?
8. What's missing, or what would you do differently?

01 · HOW IT WOULD WORK

Same SkyyTask job, a much better handoff

Everything up to “job done” stays exactly as it is in SkyyTask. ShootPortal steps in only for the last mile: getting the files from the pilot to the client, beautifully and trackably.

TODAY

Complete Job › OTP code › Google Drive link

- ✕ Clients juggle a code and leave the app for Drive
- ✕ Unbranded folders; no view or download tracking
- ✕ Pilots set up folders and sharing by hand

WITH SHOOTPORTAL

Transfer deliverables › Upload › Branded client page

- ✓ The upload screen opens inside the SkyyTask app, already tied to the job
- ✓ The client gets one private link: no code, no login
- ✓ SkyyTask hears back automatically at every step

A The workflow, step by step

1. **A job is set up in SkyyTask, like today**
   SkyyTask quietly tells ShootPortal the job's address, the client and the pilot. Nobody has to type anything twice.
2. **The pilot taps “Transfer deliverables”**
   A SkyyTask-branded upload screen opens right inside the app.
3. **The pilot uploads and taps “Submit delivery”**
   Photos, video, documents or inspection files, from phone or computer. If the signal drops, it picks up where it left off.
4. **The client gets their private delivery page**
   By a branded email from us, a link in your SkyyTask chat, or both, whichever you prefer.
5. **The client views and downloads**
   Everything organized by type, available for 90 days.
6. **SkyyTask is told what happened, automatically**
   “Delivered,” “client viewed,” “client downloaded,” so you can close the job or release the pilot's pay without checking by hand.

What SkyyTask keeps

- ✓ The job, bidding and pricing
- ✓ The client relationship and your chat
- ✓ Payments and pilot payouts
- ✓ Your brand, front and center

What ShootPortal handles

- ✓ The branded upload screen for pilots
- ✓ Safe storage for every file type
- ✓ The branded delivery page and emails for clients
- ✓ Automatic updates back to SkyyTask

B The big picture

1	2	3	4	5	6
SkyyTask job	**“Transfer deliverables”**	**Branded upload**	**ShootPortal**	**Delivery page**	**Status back**
Set up like today	One tap in the app	Big files, resumable	Stores & organizes	Private & branded	Automatic updates
SKYYTASK	PILOT	PILOT	SHOOTPORTAL	CLIENT	SKYYTASK

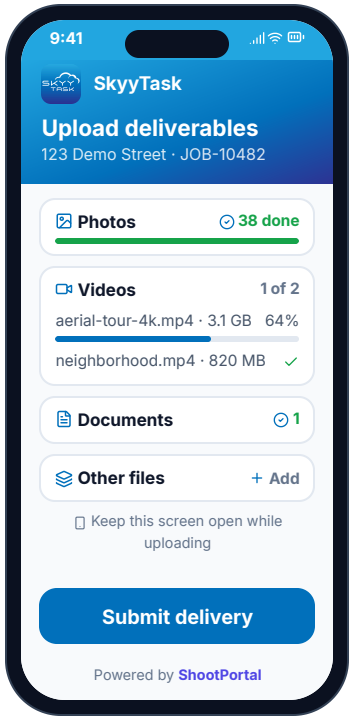

A SIMPLE WAY TO PICTURE IT

Think of SkyyTask as the store and ShootPortal as the delivery service, with **SkyyTask's logo on the truck**. SkyyTask takes the order and talks to the customer. ShootPortal picks up the package from the pilot, delivers it to the client's door, and texts SkyyTask a photo of it on the porch.

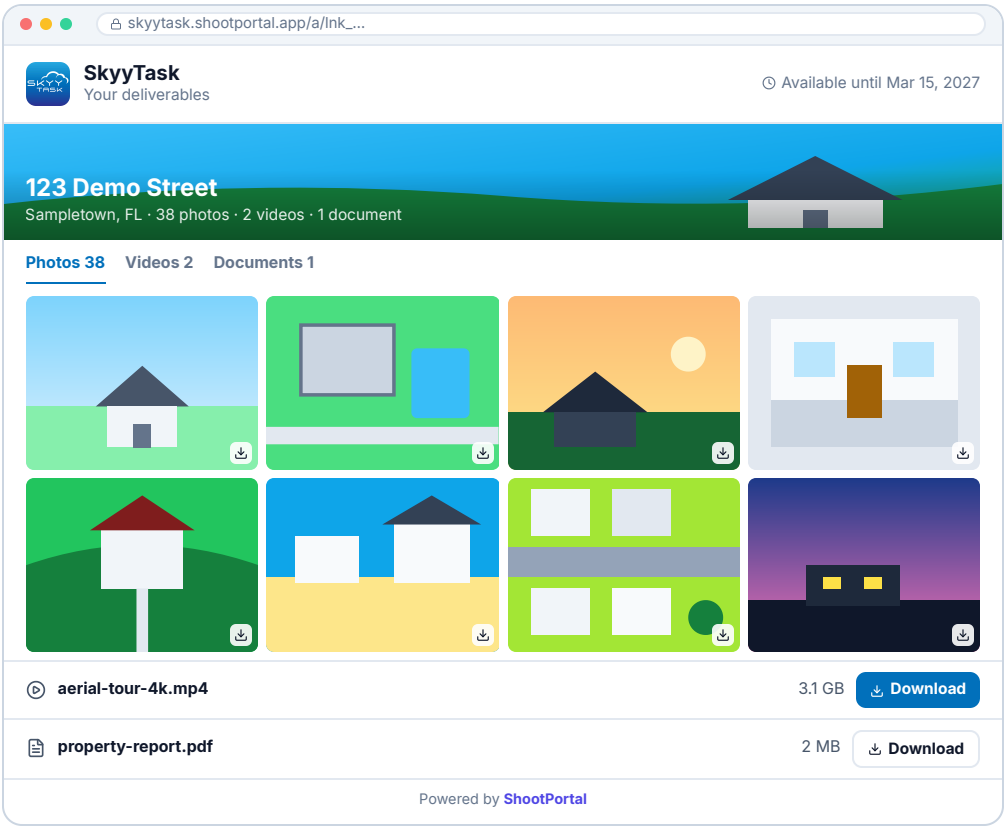

02 · WHAT EVERYONE WOULD SEE

Three screens, all wearing SkyyTask's brand

Illustrated mockups with made-up demo data, to show the idea. Final screens will come from the real product once it's built.

The pilot
Tap “Transfer deliverables”, add files, tap Submit. Progress is saved if the connection drops.

The client's delivery page
Opens from one private link. Just this job's media, with download buttons. No prices or payment screens, ever.

Subject: Your deliverables for 123 Demo Street are ready

Your deliverables are ready

Hi Pat Agent, your photos and video for 123 Demo Street are ready to view and download.

View deliverables

Private link · available until Mar 15, 2027

Sent on behalf of SkyyTask · Powered by ShootPortal

The client's notification
Sent in SkyyTask's name, or skipped if you'd rather share the link in your own chat.

JOB-10482 · Delivery status
Updated automatically by ShootPortal webhooks

Delivery submitted	`delivery.submitted · 41 files · 3.4 GB`	4:40 PM
Client portal live	`delivery.published`	4:40 PM
Pat Agent viewed	`delivery.viewed`	5:12 PM
Pat Agent downloaded	`delivery.downloaded`	5:15 PM

What SkyyTask gets back
An example of the live status SkyyTask could show in its own app or dashboard.

A simple price per delivery, and a clear path to launch

A The pricing I'm proposing

INITIAL PRICING — SUBJECT TO CHANGE

One flat price per delivery, based only on how big it is. You'd know what every job costs the moment it's delivered, and can work it out before the job even starts.

STANDARD
$3
Up to 5 GB
Typical residential real estate shoot

LARGE
$12
5 – 25 GB
Commercial property, thermal inspection

XL
$40
25 – 100 GB
Mapping / orthomosaic site

OVER 100 GB
$40 + $0.40/GB
Above 100 GB
Large enterprise mapping, point clouds

$199/month minimum
Only applies if a month's deliveries add up to less. Past $199, you pay just the total.

Launch credit
The first 50 GB of deliveries are free, and the minimum is waived while we launch.

90 days included
Every delivery stays up 90 days. Need longer? $0.05 per GB per month.

B The roadmap

This week
You read this and send me your thoughts

Nov 11
We walk through it together and settle the open questions

Late Nov
We agree on the plan and pricing in a short written summary

Mid-Dec
Your developers get a test sandbox and the Developer Guide

Jan 2027
We build and test the full flow together

Feb 2027
Go live with real pilots and clients

C What you'll get from me

DRAFT READY

Integration Guide
For you and your team: the full workflow, every screen, and who builds what. About 6 pages.

DRAFT READY

Developer Guide
For your developers: the technical how-to, with examples. Finalized with the test sandbox.

DRAFT READY

Pricing Sheet
The numbers above on one page, finalized once we agree on them together.

Tell me what you think.
Reply with notes, mark this up, or just bring your thoughts on November 11. I'd rather hear what's wrong now than after we've built it.
